This will generate an output.txt file with converted Base64 data in the same folder. These three bytes are joined together in a 24 bit buffer producing the binary sequence "010011010111000101101110". Apple's Safari browser lets you save individual Web pages for offline viewing by storing all the elements of the Web page in a Web archive, denoted by the .webarchive file extension. This software generates a .b64 file in the same directory as input file and saves the Base64 data in that. In the same way, you can decode your b64 file to get back your data. Decode each line separately: The encoded data usually consists of continuous text, so even newline characters are converted into their Base64 encoded forms. You can also try opening the .webarchive file from your browser as the browser may be able to open the file without an external conversion process. Details of the Base64 encoding Base64 is a generic term for a number of similar encoding schemes that encode binary data by treating it numerically and translating it into a base-64 representation. The easiest way to view .webarchive files is to open them using the Safari application. Select a file to upload and process, then you can download the decoded result. Simply enter your data then push the decode button. As this example illustrates, Base64 encoding converts 3 uncoded bytes (in this case, ASCII characters) into 4 encoded ASCII characters.
